(54) Synchronous system for parallel data scrambling.

© Of the type formed by a pseudorandom code generator and a block that performs the synchronizing and the scrambling in parallel which, in addition to the initialization signal, receives as inputs the set of parallel input data and the codes generated by the code generator, and produces the scrambled parallel data at the output.

The modulo-2 adders used in the feedback

loops of the pseudorandom code generator have only two inputs, and the outputs of the code generator in the parallel working time slots tp and tp+1 are related through the expression:

 $C_{tp+1} = T^n(nxn).C_{tp}$

simplifying the result accordingly.
